Recently graduated in software engineering, I am passionate about mobile development, especially in Flutter and React Native, and I am improving my Software Quality (QA) skills through studying Ruby, Cucumber, Cypress. With a practical and collaborative approach acquired through personal projects and open source contributions, I seek opportunities to apply my versatility and passion for technology, aiming to create innovative mobile solutions and ensure high quality in applications through automated testing.

Professional Experiences

Freelance – Clothing Sales Website

Worked on an online clothing sales website, leveraging the versatility of the WordPress platform. In this project, was customized a specific WordPress theme to deliver an attractive and functional visual presentation of products, and implemented a direct redirect to the owner's WhatsApp upon clicking on each clothing item.

Technologies: WordPress, Theme Customization, WhatsApp Integration.

Scholarship - PIBIC

Uenp | 10/2022 – 10/2023

The work reports on research using the Machine Learning for Kids platform and Polya's Problem Solving method to evaluate its effectiveness in initial ML learning. A practical workshop was held with students, who developed and tested models. The opinions collected at the end showed that the combination of tools was useful and stimulating.
